Reinventing HPC with Quantum – A year in perspective

Session Abstract: Quantum is here — and like AI in the past, it is reinventing HPC. I share my learnings and perspectives on some key questions that I have encountered over the past year – such as what does good like? What do we need for a universal, fully fault-tolerant machine? How does quantum work with AI and HPC? What is the buying criteria? What are the benchmarks? What can I do with these machines? And many more. See you soon.
