

Pratap Raychaudhuri is a Senior Professor at the Tata Institute of Fundamental Research and heads the Superconductivity Lab in TIFR. His research is on Superconductivity focussing on the study of these materials in the form of thin films, using various probes such as low temperature scanning tunneling spectroscopy, low frequency electrodynamic response measurements, magnetic penetration depth measurements and magnetotransport. He is a fellow of Indian National Science Academy, Indian Academy of Science and a recipient of Shanti Swarup Bhatnagar Prize in Physical Sciences.
